Record-Strength El Niño Event Is Expected This Winter

What This Means for Southern California Weather This Winter

PRESENTED ON MONDAY, NOVEMBER 9, 2026

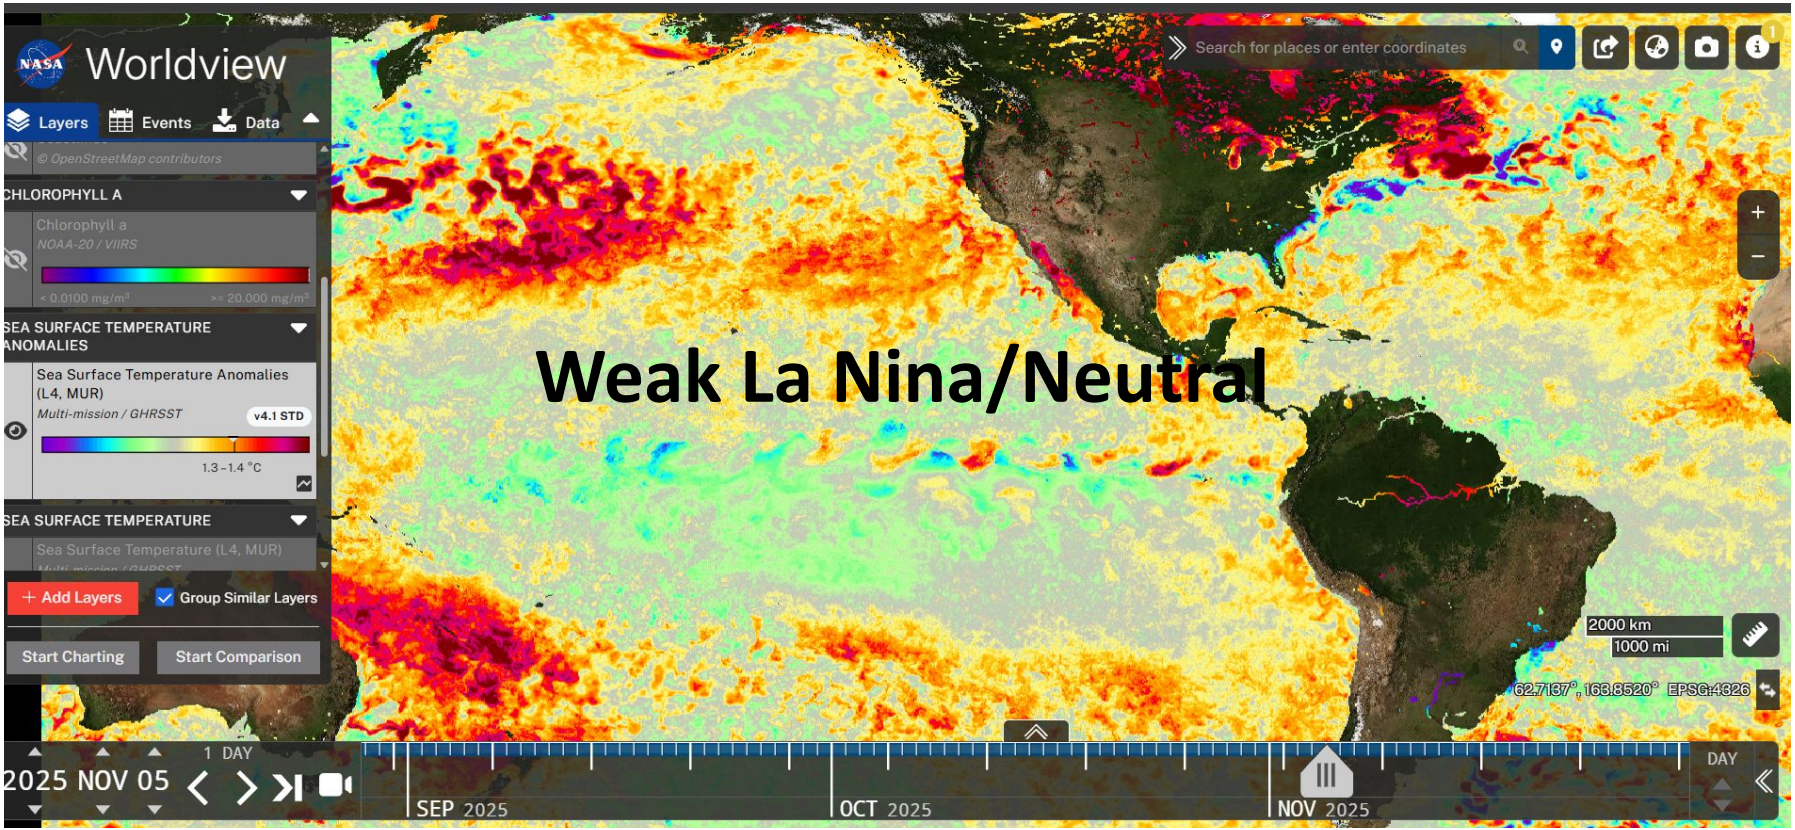

Max’s Weather Service Newport Beach, CA

El Nino is not a storm!

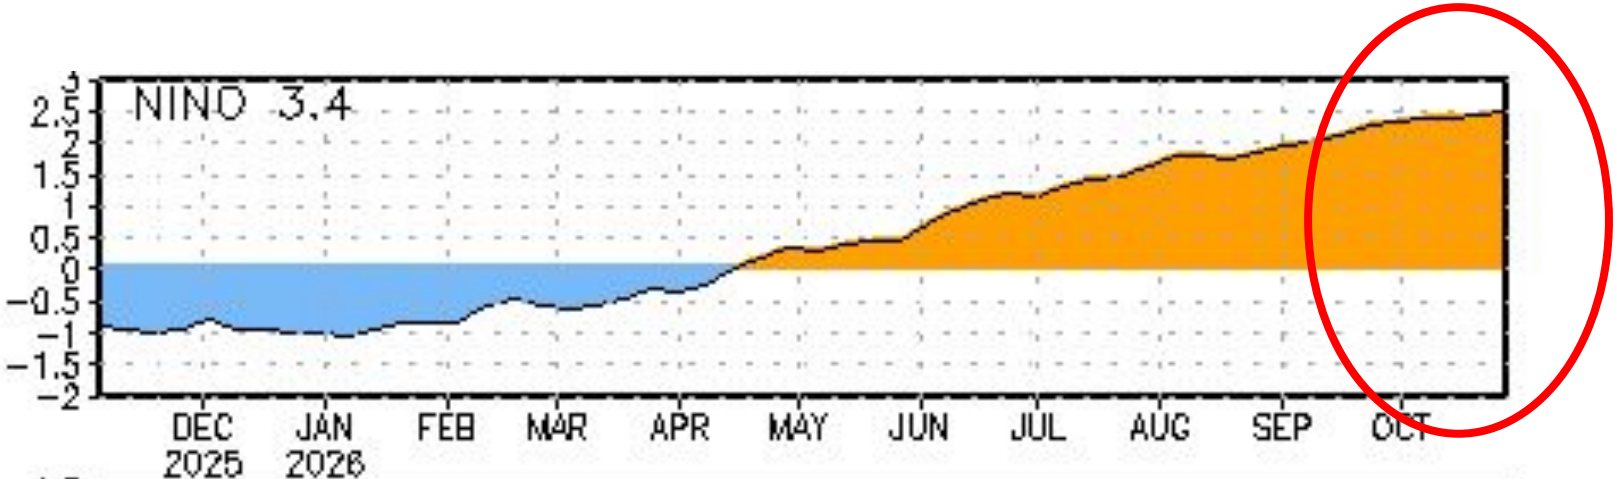

Current Sea Surface Temperature **ANOMALIES (NOT RAW TEMPERATURE)**

This Time Last Year…

El Nino Chart

“Very Strong” El Nino Likely Through At Least February, 2027

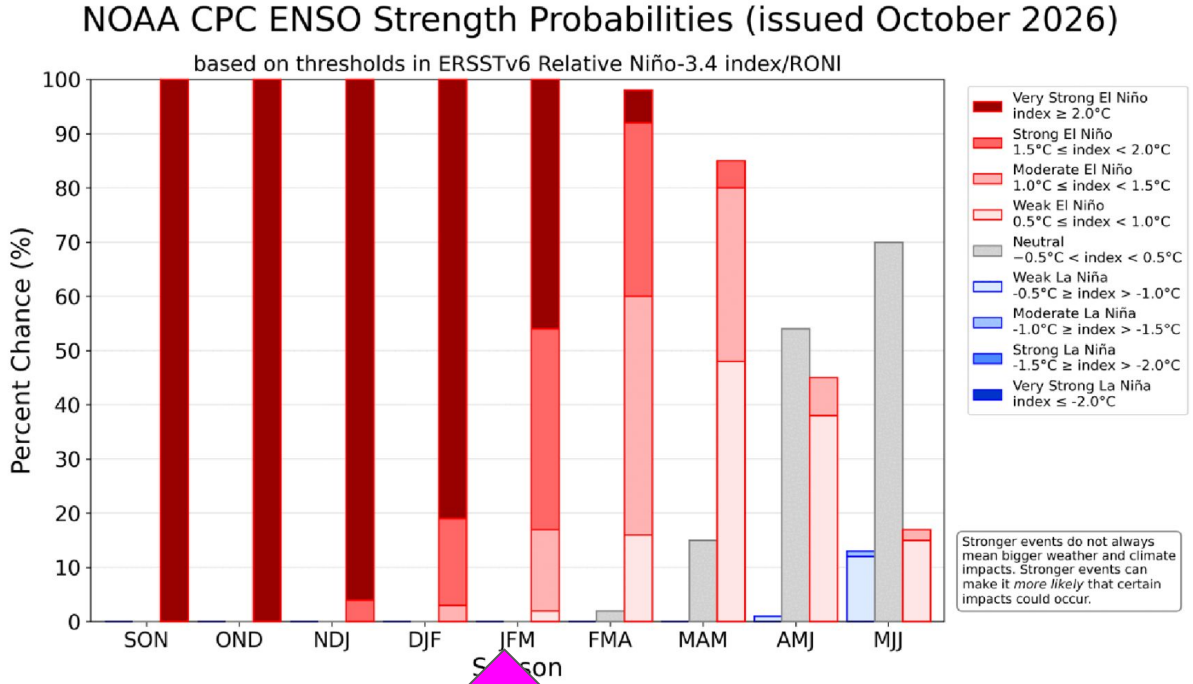

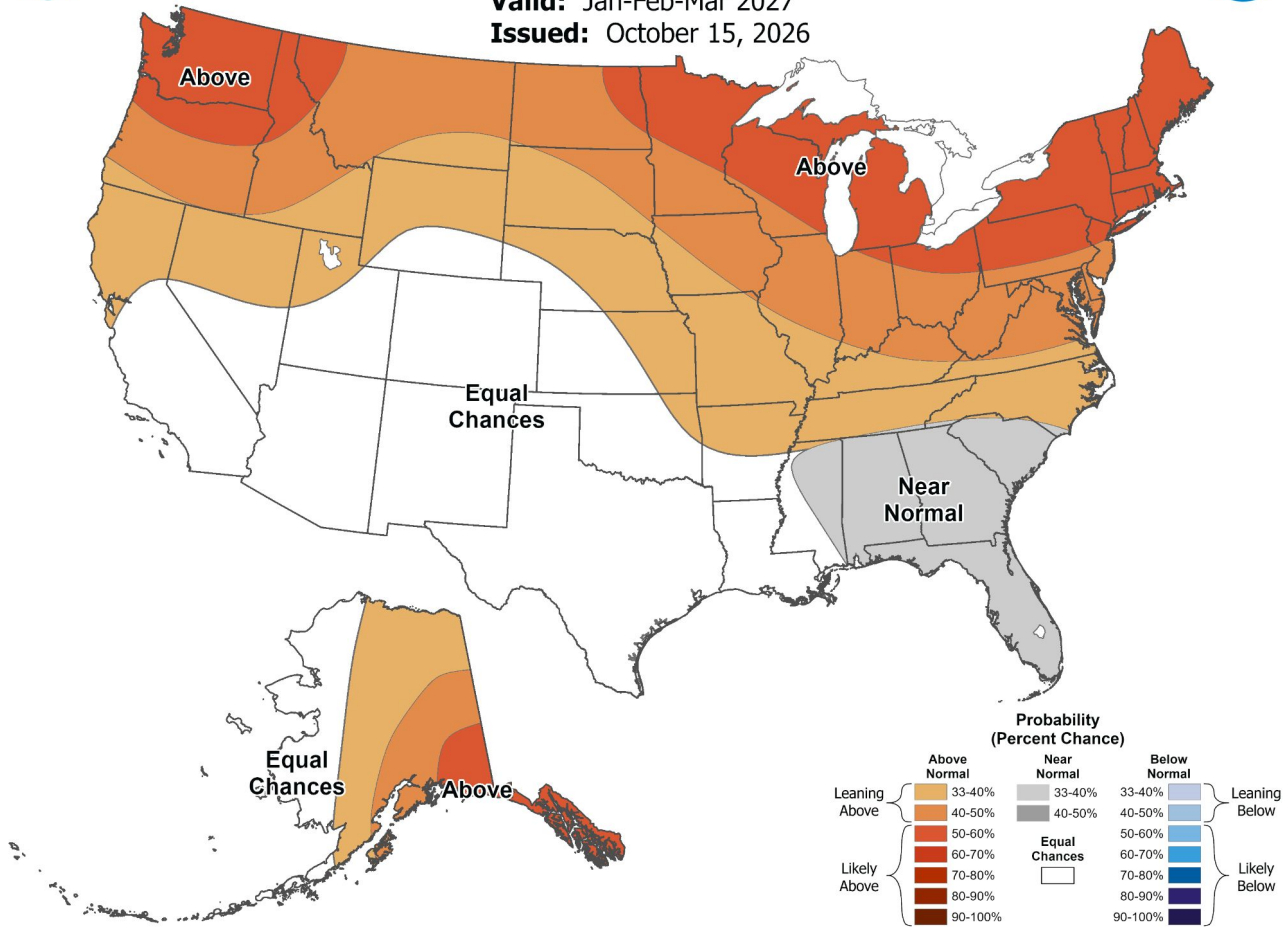

Figure 8. ENSO strength probabilities [illegible] Niño-3.4 relative sea surface temperature index (5°N-5°S, 170°W-120°W) minus trop[illegible]ean (20°N-20°S). The relative index is re-scaled to match the variance of the traditional index. Figure updated 8 October 2026. Seasonal Temperature Outlook

Valid: Jan-Feb-Mar 2027
Issued: October 15, 2026

Seasonal Precipitation Outlook

Valid: Jan-Feb-Mar 2027
Issued: October 15, 2026

NOAA Outlooks are PROBABILITIES **(NOT A PREDICTION OF STORMS).**

Probability (Percent Chance)

	Above Normal	Near Normal	Below Normal	
Leaning Above	33-40%	33-40%	33-40%	Leaning Below
	40-50%	40-50%	40-50%	
Likely Above	50-60%	Equal Chances	50-60%	Likely Below
	60-70%		60-70%	
	70-80%		70-80%	
	80-90%		80-90%	
	90-100%		90-100%	

Probability (Percent Chance)

	Above Normal	Near Normal	Below Normal	
Leaning Above	33-40%	33-40%	33-40%	Leaning Below
	40-50%	40-50%	40-50%	
Likely Above	50-60%	Equal Chances	50-60%	Likely Below
	60-70%		60-70%	
	70-80%		70-80%	
	80-90%		80-90%	
	90-100%		90-100%	

NOAA Outlook Detailed Probabilities

(You must click on the outlook to see it!)

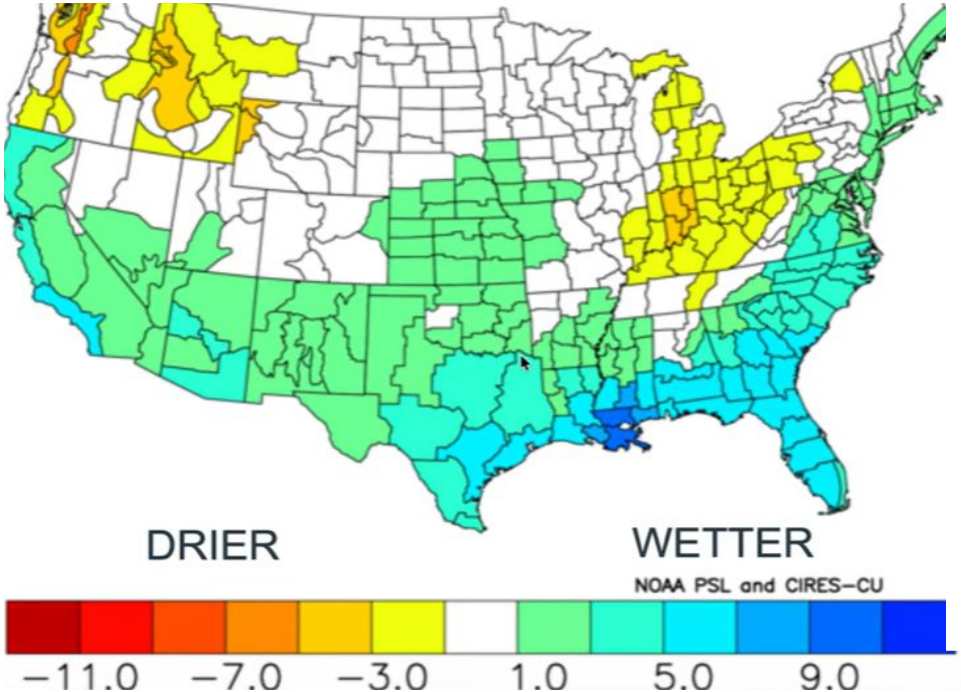

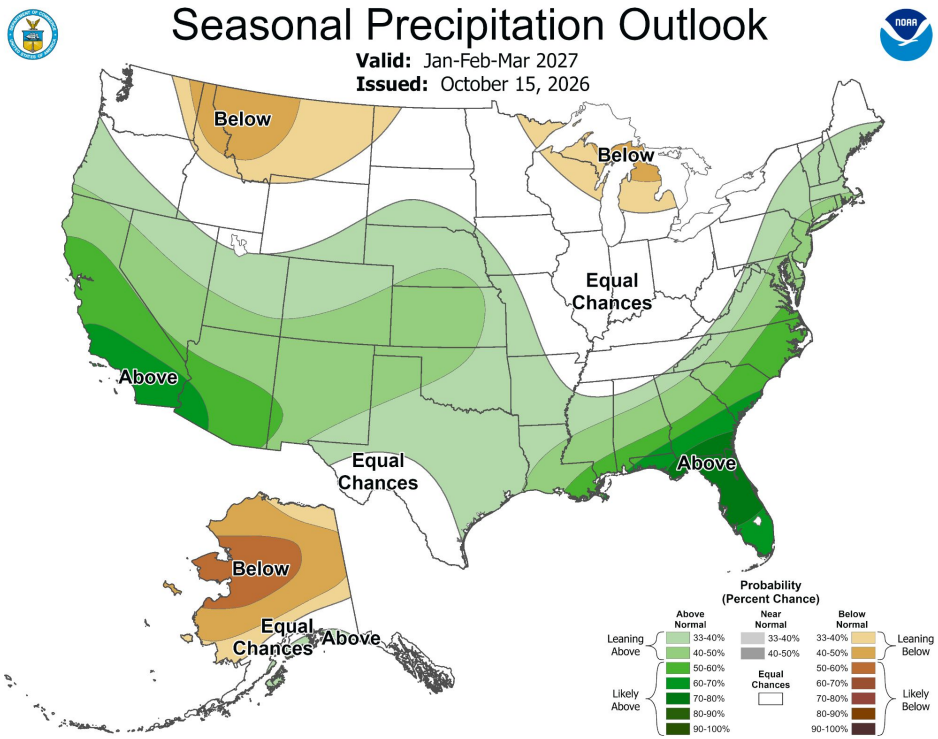

Because it is nearly impossible to predict storms months in advance,NOAA Outlooks primarily use HISTORICAL DATA from previous El Nino/La Nina years.

There is still a low, but nonzero chance of a BELOW AVERAGE or NEAR NORMAL season in terms of rainfall.

Official Forecast is Heavily Based on Historical Data from Strong to Very Strong El Ninos

Precip. Anomalies in Previous Strong or Very Strong El Ninos (includes 2015-2016)

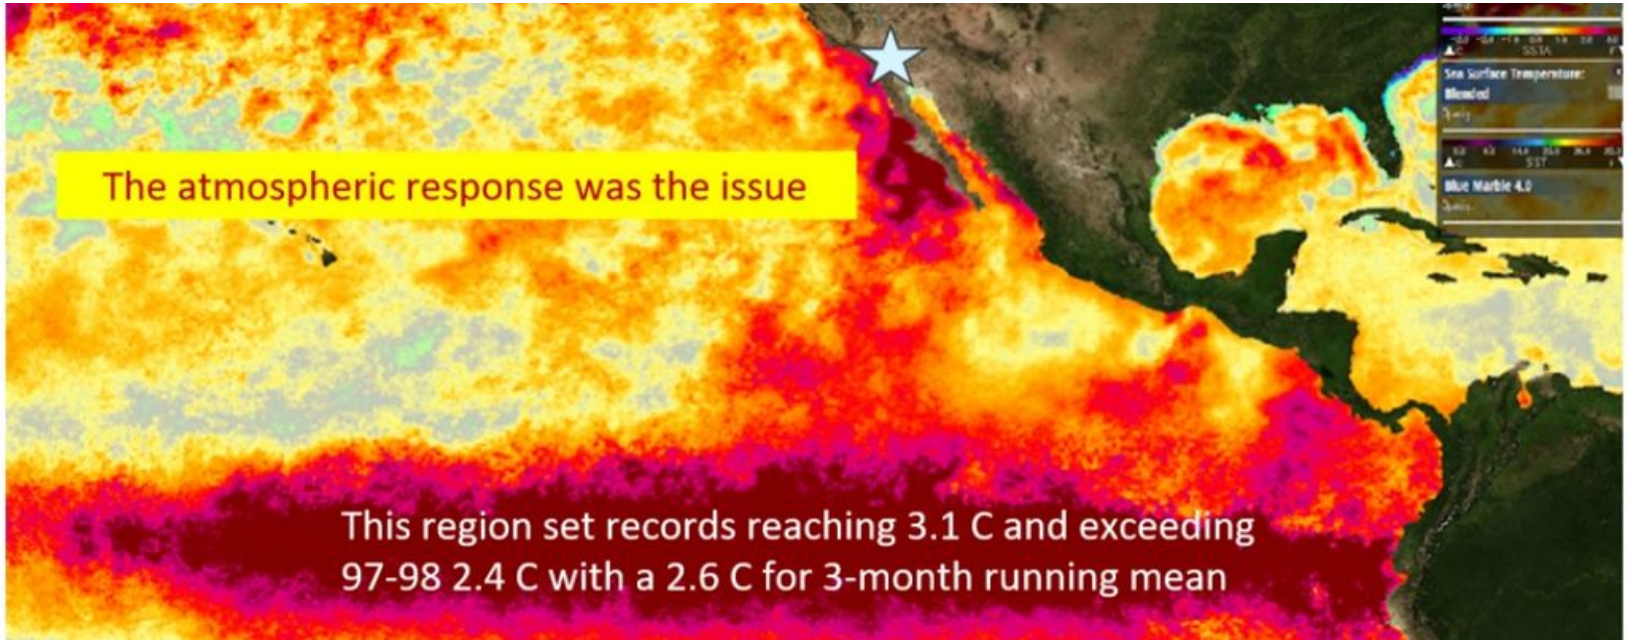

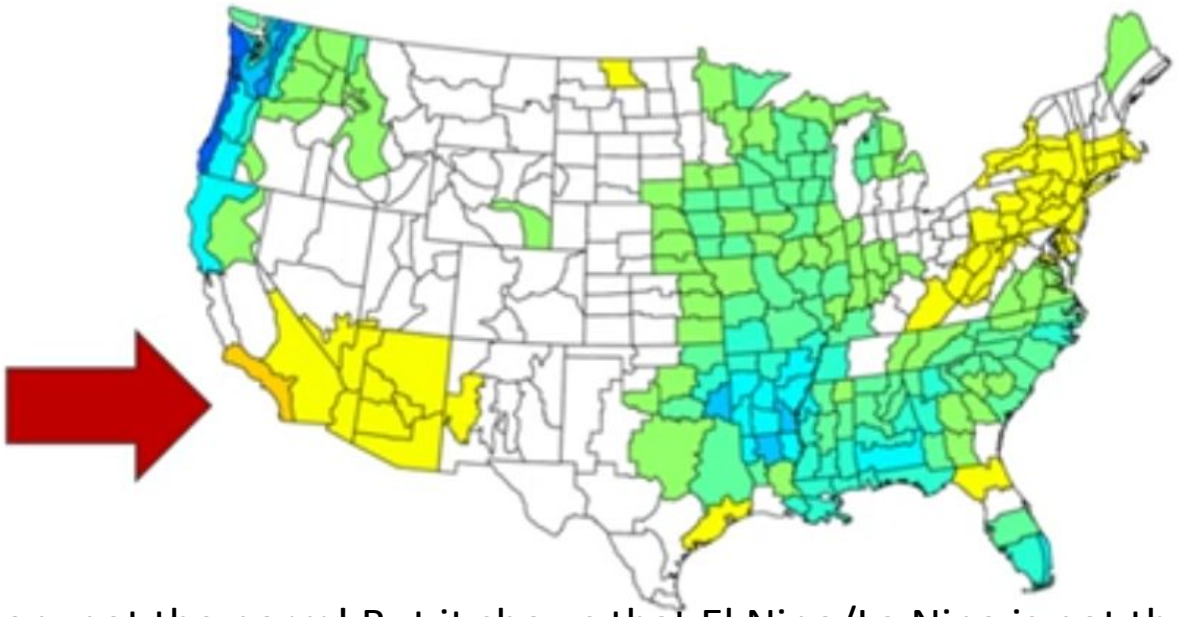

Official NOAA outlook closely matches historical data

El Nino was Record Strong in Winter 2015-2016

Image Courtesy of NWS San Diego, CA

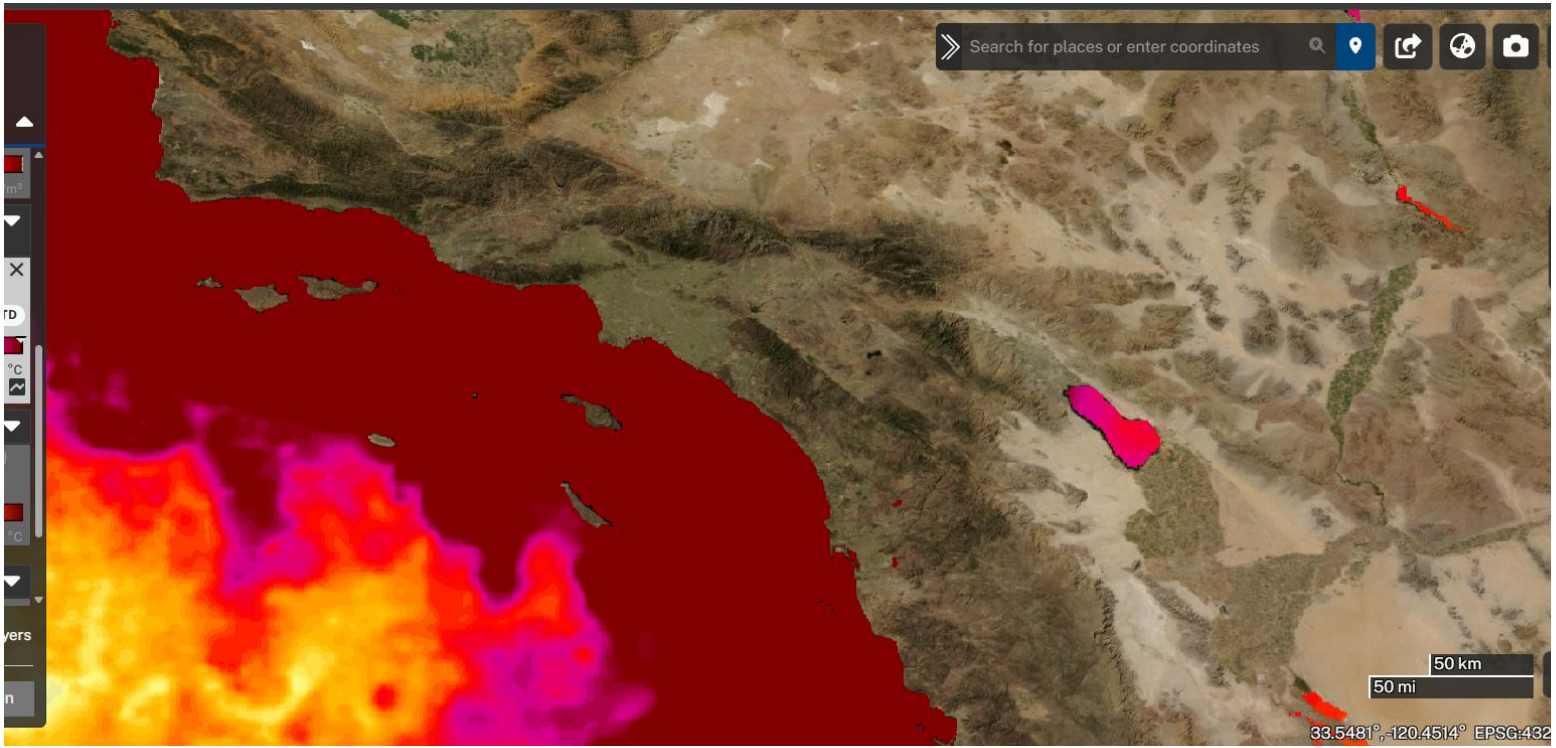

Record Breaking El Nino in 2015-2016 was Dry in Socal

This is an exception, not the norm! But it shows that El Nino/La Nina is not the only thing influencing our weather.

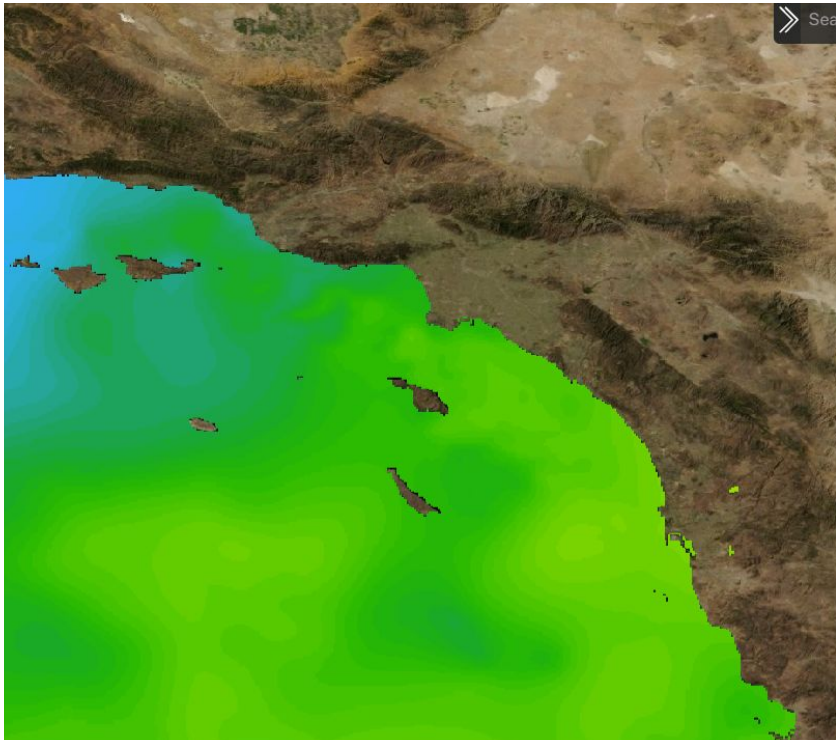

Marine Heat Wave…

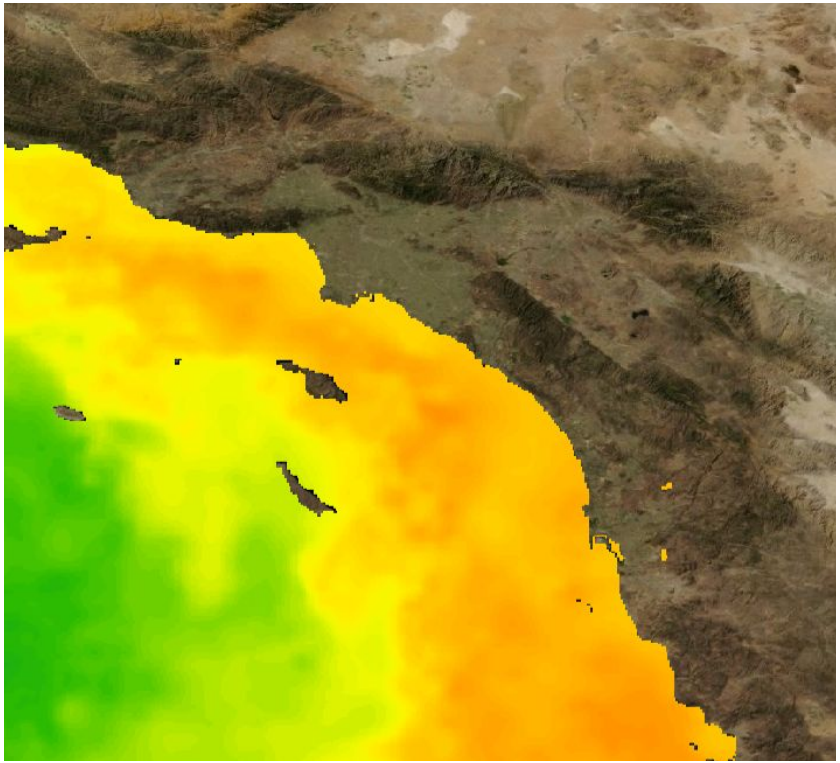

Sea Surface Temp ANOMALIES are off the charts along the Southern California Coast (5-7 degrees celsius above normal)

Compared to Last Year…

November 2025

November 2026 (Present)

19-20 degrees celsius (66-68 F)

24-25 degrees celsius (75-77F)

Almost 10 degrees warmer than last year!

Very Warm Waters Offshore Will Likely Lead to Heavier Rain and Significant Coastal Flooding/Erosion at Beaches
